

Miller Research Potato Pest Management Field Day

Wednesday, August 17 from 10:00 am to 12:15 pm

Miller Research will be holding its annual potato pest management field day on Wednesday, August 17. The event is open to the public and there is no cost to attend **but please RSVP so we can plan appropriately for the event.** This can be done on our website or by responding to cheryn@millerresearch.com or (208) 431-4420.

The field day will begin at the field located at the main office at Miller Research at 422 E 200 N in Rupert (42.649075 N, -113.585594 E).

Agenda:

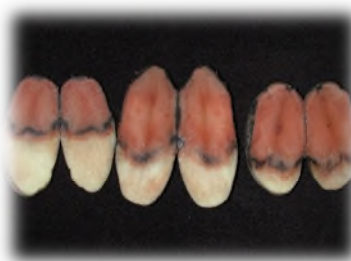

10:00-10:45	Fungicide programs for the control of foliar disease (early blight, brown spot, white mold, and black dot) and fungicide resistance management
10:45-11:05	Fungicides for Rhizoctonia management
11:05-11:20	New research on powdery scab and potato mop-top virus
11:20-11:45	Seed treatments for Fusarium dry rot management
11:45-12:00	Effect of irrigation on the performance of pink rot fungicide treatments
12:00-12:15	Performance of polymer-coated urea for nitrogen management in potato

Lunch will be provided at the conclusion of the meeting.

The presentations will focus on chemical management of diseases and will highlight research which has been funded by the Pacific Northwest Potato Research Consortium. ISDA pesticide recertification credits (2) and CCA Pest Management credits (2) have been requested for this meeting.

Rhizoctonia on potato roots

Pink rot

Early blight

Fusarium dry rot

Powdery scab root galls

Potato mop top virus
